2005 California Energy Code Requirements

INTRODUCTION

The 2005 California Energy Requirements are considerably more restrictive than past energy requirements. Both installers and inspectors will benefit from having the methods of compliance clearly depicted on the construction blueprints. The purpose of this technical bulletin is to specify the plan requirements for building permit applications submitted on or after October 1, 2005.

TECHNICAL DETAILS

Plans for building permit applications submitted after October 1, 2005 shall have the following information from the energy calculations **graphically represented** on the plans:

1. Kitchen lighting and switching
2. Bathroom lighting and switching
3. Living and other general lighting and switching
4. Garage lighting and switching
5. Radiant barrier
6. Glazing fenestration
7. Required HERS inspections
8. Insulation R-values
9. Zonal controls

In addition, the current requirement that the mandatory features and devices be listed on the plans remains in effect.
