Bottom Line Savings

- Savings of almost 18 million gallons per year in 1200 new homes.
- Significant savings in water bills for these homes.

Water

- Reduced water use in typical front yards from an average of approximately 62,250 gallons per year (GPY) to 47,400 GPY. This has been applied to approximately 1200 new homes for a savings of almost 18 million GPY. This is equal to about 310 acre-feet of water, enough for more than 400 new homes. The amount saved is enough to fill almost 600 standard swimming pools every year.
