

Should I get tested for HIV?

Yes, if you or your partner:

- Had unprotected vaginal, anal or oral sex OR
- Shared needles/works for injecting drugs, steroids, medicine or vitamins OR
- Used unsterile or shared needles for tattoos or body piercing OR
- Were tested less than 6 months after the last time you put yourself at risk.

Why is it important to get tested?

If you are infected with HIV (test positive), you can:

- Get early medical care to help stay healthy;
- Change unsafe sex, alcohol and/or drug use practices to protect yourself and others.
- Still infect someone else, even if you feel healthy.

If you test negative, you can learn more about how to permanently keep yourself negative .
