TABLE OF CONTENTS

<u>Section</u>	<u>Page Number</u>
Introduction	4
Road Assessments	5
A. Assessment Phases 1, 2, & 3	5
B. Assessment Phase 4	5
Assessment Updates	6
Road Status and Conditions	6
Road Class Nomenclature	6
Timberland Conversion and Road Storm Proofing Implementation Schedule	8
Road Width and Construction Standards	16
Watercourse Crossing Construction	16
Soil Stabilization Measures	17
Maintenance	18
Monitoring	18
Summary	19
References	19
 Appendices	
A Characteristics of Storm Proofed Roads and Decommissioned Roads	20
B. Planned Road Work on Preservation Ranch Data Base*	21-113
C. Definitions	114
D. Road Assessment Phase 1, 2, 3 & 4 Index Maps**	115-204
E. Road Point Maps***	205-264

* This data base contains site specific upgrading measures for all assessed roads. Sites are ordered by road number then by mileage along that road. Each site is assigned an identification number in the "GIS# ID#" column.

** This appendix is presented only to link this Road Plan back to the four separate Road Inventory and Road Upgrading Plans upon which this Road Plan is based (some of which used a different site naming convention). The three digit site numbers on the Phase 1, 2 & 3 Index Maps correspond to the "THP# Rd Point" column in the data base (Appendix B). The four digit site numbers on the Phase 4 Index Maps correspond to the "GIS# ID#" column in the data base (Appendix B).

*** This appendix contains a set of maps that illustrate all road site points using the four digit site numbers that correspond to the "GIS# ID#" column in the data base (Appendix B). Only sites which are points are labeled. Sites which are linear segments of road are not labeled on the maps. These maps and the four digit site numbers are the final site identification numbers that will be used for the Preservation Ranch Project..
