

2008 Rubberized Asphalt Pavement Overlay Project – Porter Creek

The 2008 Overlay Project involves several roads in the County, including Porter Creek in East County towards Calistoga. Above is a view of Porter Creek before the Overlay is applied.

2008 Rubberized Asphalt Overlay Project – Porter Creek

An overlay involves placing asphaltic concrete over the road after the surface is prepared. The thickness of the material is generally determined by the condition of the roadway and the volume and type of traffic using the road.

2008 Rubberized Asphalt Overlay Project – Porter Creek

An overlay can extend the life of the road for up to 20 years. The rubberized asphalt that was used this year is a higher quality material that is intended to provide a more durable and quieter wearing surface. This project began in September of 2008 and should be completed in October 2008.
